Experience

Cuemath

Jul 2024 – Apr 2026

Software Development Engineer – Full-Stack Dev

- Built and shipped scalable frontend systems backed by REST APIs and real-time communication pipelines, supporting thousands of active users
- Integrated frontend with RESTful APIs and backend services, handling data fetching, caching, and error states
- Worked with real-time systems (WebSockets / Pub-Sub) ensuring low-latency data synchronization
- Collaborated on API contract design and data flow architecture between client and backend
- Built reusable cross-platform UI components and shared logic between React and ReactNative, reducing duplication and speeding up feature development

Cuemath

Nov 2023 – Jul 2024

SDE Intern

- Developed React and React Native components for core product flows including learning interfaces and messaging-related UI
- Created reusable utilities and components to improve development speed and maintain consistency across systems
- Implemented real-time updates using WebSockets to support live gameplay interactions

Frugalx

May 2023 – Jul 2023

Web-ML Intern

- Built web interfaces integrating machine learning outputs into interactive user features

Projects

Browser-Based Operating System | Next.js, Zustand, React, TypeScript

- Built a fully interactive operating system inside the browser with window management, file system, and multi-app architecture
- Implemented shared state system enabling cross-application file access and persistence across sessions
- Designed macOS-inspired UI with dynamic windowing, dock system, and app lifecycle management

3D Interactive Portfolio | React, Three.js

- Built interactive portfolio with custom 3D rendering, animations, and dynamic UI transitions
- Integrated mini-game experiences and audio interactions to enhance user engagement

3D Avatar Streaming System | React, Three.js, WebRTC, PeerJS

- Developed real-time 3D avatar streaming system enabling low-latency interaction between users
- Integrated WebRTC-based communication pipelines for audio, messaging, and avatar synchronization
- Built customization system using Mediapipe-driven inputs for interactive user control

Technical Skills

Languages: JavaScript, TypeScript, Python, C++

Backend & Systems: Node.js, Express.js, REST API Design, WebSockets (Pub/Sub), WebRTC, Event-driven Architecture, Asynchronous Programming

Databases: MongoDB, PostgreSQL

Frameworks & Libraries: React, Next.js, React Native, Three.js

Core Concepts: Data Structures & Algorithms, System Design, Components Architecture, Performance Optimization

Tools: Git, AWS(EC2, S3)

Education

Rajasthan Technical University

2024

B.E. / B.Tech in Computer Science

- Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems
