Experience

Cuemath

Jul 2024 – Apr 2026

Software Development Engineer

- Built and shipped core product features across web and mobile using React and React Native, including onboarding, home feed, and authentication flows
- Implemented real-time UI updates using WebSockets (Pub/Sub), enabling live user interactions and synchronized state during active sessions
- Built frontend logic for interactive learning modules, handling question flow, timers, scoring, and state synchronization for real-time gameplay experiences
- Built reusable cross-platform UI components and shared logic between React and React Native, reducing duplication and speeding up feature development
- Leveraged AI-assisted workflows (Claude, design-to-code tools) to accelerate UI development and reduce iteration time on component implementation

Cuemath

Nov 2023 – Jul 2024

SDE Intern

- Developed React and React Native components for core product flows including learning interfaces and messaging-related UI
- Built browser-based games using Phaser and integrated them with React applications
- Created reusable utilities and components to improve development speed and maintain consistency across games

Frugalx

May 2023 – Jul 2023

Web-ML Intern

- Developed web interfaces that integrated machine learning outputs into user-facing features

Projects

Browser-Based Operating System | Next.js, Zustand, React, TypeScript

- Built a fully interactive operating system inside the browser with window management, file system, and multi-app architecture
- Implemented shared state system enabling cross-application file access and persistence across sessions
- Designed macOS-inspired UI with dynamic windowing, dock system, and app lifecycle management

3D Avatar Streaming System | React, Three.js, WebRTC, PeerJS

- Developed real-time 3D avatar streaming system enabling low-latency interaction between users
- Integrated WebRTC-based communication pipelines for audio, messaging, and avatar synchronization
- Built customization system using MediaPipe-driven inputs for interactive user control

3D Interactive Portfolio | React, Three.js

- Built interactive portfolio with custom 3D rendering, animations, and dynamic UI transitions
- Integrated mini-game experiences and audio interactions to enhance user engagement

Technical Skills

Languages: JavaScript, TypeScript, Python, C++

Frameworks & Libraries: React, Next.js, React Native, Three.js, Node.js

Frontend & Systems: State Management (Context API), Component Architecture, Performance Optimization, Asynchronous Programming

Technologies: WebSockets, WebRTC, REST APIs, Git, Vite/Webpack

Other: Data Structures & Algorithms, System Design, AI-assisted development workflows

Education

Rajasthan Technical University

2024

B.E. / B.Tech in Computer Science

- Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems
